-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. Claims 23-27 and 29-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over the patent to Gunze et al. (JP 2001-001645) in view of the patent to Nakamura (JP 07-228048).

The primary reference teaches a reversible multicolor recording medium comprising a substrate coated with a plurality of recording layers that differ in hue. LTHC material is employed in association with the coloring material. The secondary reference teaches the advantages (e.g., the ability to obtain different hues) of using a mixture of LTHC material which absorb at different wavelengths. Consequently, use of a mixture of LTHC material in the multicolor recording medium of the primary reference as suggested by the secondary reference in order to obtain different hues would have been obvious to one of ordinary skill in this art in the absence of unexpected results.

2. Claims 24 is rejected under 35 U.S.C. 103(a) as being unpatentable over the patent to Gunze et al. in view of the patent to Nakamura taken with either of the patents to Ishida et al. (JP 59-089192) or Tsuboi et al. (JP 2004-155010).

The primary and secondary references are discussed above. The tertiary references teach that LTHC material is routinely added directly into the recording layers of multicolor recording media. Given the cost savings of not having to apply separate layers, incorporation of the primary reference's LTHC material into the recording layers would have been obvious to one of ordinary skill in this art in the absence of unexpected results.
